

Loading Table

Here's a quick project that will increase your safety on the gun range. The notches provide the necessary support and stability to ease loading in range situations.

You will need a piece of 1/4" plywood, 9" wide and the length of your table and two "C" clamps. Cut notches to a depth of 3" down one of the long sides of the board.

Clamp the board to the table top so that the notched side overhangs the table by about 3 inches.
