

# Stuck in the mud?

***Pull with safety.***

Tow ropes, chains or cables should be in excellent condition

Pull in a straight line whenever possible

Always use a thimble on ropes and cables

Apply power slowly and smoothly

Never use a hook or clevis that is damaged or repaired

Don't lunge with a nylon rope to use its rebound energy

Attach only to the drawbar on the towing tractor

When pulling with two tractors, hook them side-by-side
