

## **Guidelines for Feeding Scabby Grain to Dairy Cattle**

With grain at less than 50 percent of the diet, maximum concentration in total diet should be no more than:

	<b>Zearalenone (ppm)</b>	<b>Vomitoxin (DON) (ppm)</b>
<b>Replacement heifers</b>	<b>5</b>	<b>10</b>
<b>Lactating cows</b>	<b>2</b>	<b>5</b>
<b>Dry bred cows</b>	<b>5</b>	<b>5</b>

Based on revised FDA standards for vomitoxin. Limited research to data suggests the amount can be higher than these guidelines.
